Claims rejection

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. **Claims 1,4,6,8,9** are rejected under 35 U.S.C. 102(e) as being anticipated by Miyamoto et al (6,195,156).

As for claims 1 and 6, the patent discloses a structure in figure (20) comprising a substrate (201) , a hydrophobic foamed material (203) on the substrate and an aqueous metallic ion elements (205) embedded by it. In the figure, the embedded elements (206) are taught as metallic elements.

As for claims 4,8,9 the foamed material is an organic material which could be a polymer or polyimide.

Art Unit: 2826

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 42,43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyamoto et al (6,195,156).**

The patent discloses all subject matter claimed but omits to disclose the claimed metal types. However, the metal elements in the patent are not restricted to specific types thereby including all known metals without discriminating any one of them. Therefore, it would have been obvious for one skilled in the art to safely conclude the claimed metals as applicable in the prior art since the prior art includes all types of metals as applicable in the structure of figure 20.

Claims 2,3,5,7,10,11 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
